29	30	31	26	27	28	29	30	24	25	26	27	28	29	30						

In this improved calendar every year is the same.

- The quarters are equal: each has exactly **91 days, 13 weeks or 3 months.**
- The four quarters are identical in form with an ordered variation within the three months.
- The three months have **31,30, 30 days** respectively
- Each month has **26 weekdays, plus Sundays.**
- Each year begins on **Sunday, 1 January;** each working year begins on **Monday, 2 January**
- Each quarter begins on **Sunday, ends on Saturday.**
- The calendar is stabilized and made perpetual by ending the year with a **365th day following 30 December** each year. This additional day is dated **'W'**, which equals **31 December**, and called **Worldsday**, a year-end world holiday.
- Leapyear Day is similarly added at the end of the second quarter. It is likewise dated **'W'**, which equals **31 June**, and called **Leapyear Day**, another world holiday in leap years.

Gregorian calendar leap year calculations also apply to The World Calendar: Years evenly divisible by 4 are leap years with exception that centennial years (those ending in -00) are not leap years unless also evenly divisible by 400.
